INNOVATIVE, CHARMING, AND PRACTICAL

As a family-run company, Koops continues to innovate and develop. New products and services are carefully and passionately integrated into our professional range, always with the vision of providing the best, high-quality refrigeration units, commercial cooling, and air conditioning.

Our in-house production line for refrigerated display counters features a unique model: the Gisel. This exceptionally robust display counter has become an integral part of our extensive range. With a passion for technology and an eye for detail, we take great pride in the Gisel. Every practical aspect has been meticulously combined with a sleek design, superior finish, and optimal presentation for your refrigerated products.

PLATE COOLING AND FORCED AIR COOLING

The Gisel refrigerated display counter features plate cooling, which is particularly ideal for the meat, fish, and deli trade. The built-in plate cooling system and support evaporator work in tandem to minimise air circulation, ensuring precise climate control and minimising product dehydration.

In addition, we can also offer the Gisel in a forced air-cooled version, where cooling is achieved through air ventilation. This method ensures optimal air circulation and consistent temperatures. The forced air circulation allows for a high stacking capacity inside the counter. We've consciously designed the evaporator to be located beneath the sales platform, making cleaning incredibly easy due to the flat base. This model is perfect for packaged products.

CHARMING AND ROBUST APPEARANCE

The refined bumper and window supports give the Gisel a charming and sophisticated look. The window supports open upwards, making the display counter easy to clean. The use of stainless steel gives the counter a strong and durable character. For fish shops, the counter is also available in stainless steel 316. The colour panels are available in any RAL colour, allowing you to match the counter to your brand identity. Power outlets are neatly concealed in a technical compartment, providing a convenient place for cables, including for devices such as internet or card payment machines.

ATMOSPHERIC LIGHTING

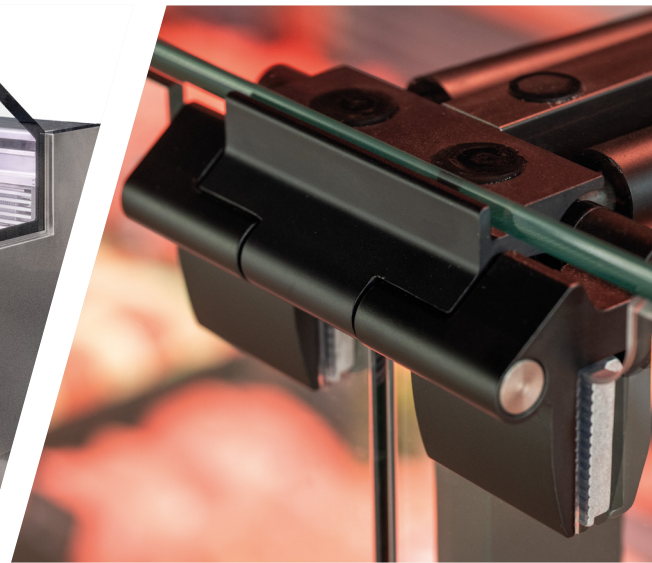

Showcase your products in the best light with the compact and atmospheric LED lighting integrated beneath the sales platform. This clever light canopy eliminates the need for additional spotlighting, while also preventing shadows within the counter. The sales platform can thus serve as an additional surface for presenting non-refrigerated products. The service counters do not require additional spotlights, as the light canopies are cleverly built in. For self-service display counters, integrated lighting is not included, but we are happy to collaborate with you to create a tailored lighting plan.

FULLY CUSTOMISABLE

You have a wide range of options when it comes to personalising your refrigerated display counter. For example, you can choose a rustic wooden front or an elegant marble effect. How about a modern composite worktop? Or perhaps a counter in your own brand colours? All of this is possible. This means you can mix and match endlessly to give the refrigerated display counter the appearance that aligns with your business identity, style, and taste. Many additional features are available, such as night covers, weighing platforms, bag holders, and more. If you have specific requirements, we'd be happy to discuss them. Collaborating is in our DNA.

PRACTICAL FEATURES

The rear of the Gisel counter comes standard with a stainless steel storage space, making it easy to store packaging materials and night covers. The worktop is flat and a generous 30 cm wide. The evaporator is coated as standard, greatly extending the counter's lifespan. The plate cooling is angled towards the back, ensuring that any condensate is directed into the drainage tray. The counter's lift-up glass panels and easy-to-clean air vents make maintenance and cleaning a breeze.

CORNER CONFIGURATION AND SELF-SERVICE

The Gisel is a modern display counter, available in plate-cooled or forced air-cooled versions and offered in various configurations and layouts. A beautiful addition to any setup is the corner configuration or self-service counter, both of which can be connected to form longer lengths, creating a seamless and stylish display.

STANDARD FEATURES OF THE GISEL:

- Plate cooling or forced air-cooled version
- Standard stainless steel worktop
- Electronic controller
- Fully welded drip tray
- Flat base for easy cleaning
- Upright glass with lift-up panels that open to the front
- 850 mm deep sales surface
- Complete stainless steel counter, with anodised aluminium window supports
- Colour panels available in any RAL colour to match your brand identity
- High stacking capacity
- Window ventilation system
- Power outlets at the back
- Option to add extra humidity control (at an additional cost)
- Multiple optional features, such as bag holders, checkout platforms, and night covers
- Refrigerant: R449A, CO2

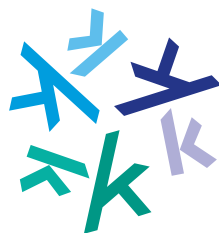

STANDARD SIZES

The refrigerated display counters are available in standard module sizes:

625 - 938 - 1.250 - 1.875 - 2.500 - 2.814 3.750 mm.
(90-degree corner, 45-degree corner).

These sizes can be combined to create long, sleek (seamless) display counters with matching components. Custom sizes are always possible, and our advisors are happy to assist.
